

ITSS SOFTWARE DEVELOPMENT/ SOFTWARE DESIGN AND CONSTRUCTION

Lab 01: Use case diagram

Lecturer: NGUYEN Thi Thu Trang, trangntt@soict.hust.edu.vn

1. SUBMISSION GUIDELINES

You are required to push all your work via the Assignment section on Microsoft Teams.

For this lab, you have to turn in:

- **An image** of the use case diagram, ensuring that your **Full name** and **student ID** are visible in the image
- The corresponding **.astah file** of the diagram image above
- The .docx file of the outlining use cases section

Deadline: Please refer to the **Assignment (Homework) - Use Case Diagram for AIMS** on MS Teams for the submission deadline.

2. HOMEWORK

In this section, you will follow the requirement modeling process and create a use case diagram for the Case Study as your homework assignment, capturing all requirements described in the file *AIMS-ProblemStatement.pdf*.

2.1. USE CASE DIAGRAM WITH ASTAH

Please see the following link to know how to make a use case diagram with Astah.

<https://astah.net/support/astah-pro/user-guide/usecase-diagram/>

2.2. USE CASE DIAGRAM FOR THE CASE STUDY

In this part, you are asked to draw the Use case diagram for AIMS Project by using Astah. When you finish drawing the diagram, export your diagram to a PNG file, which must include your full name and student ID in the image.

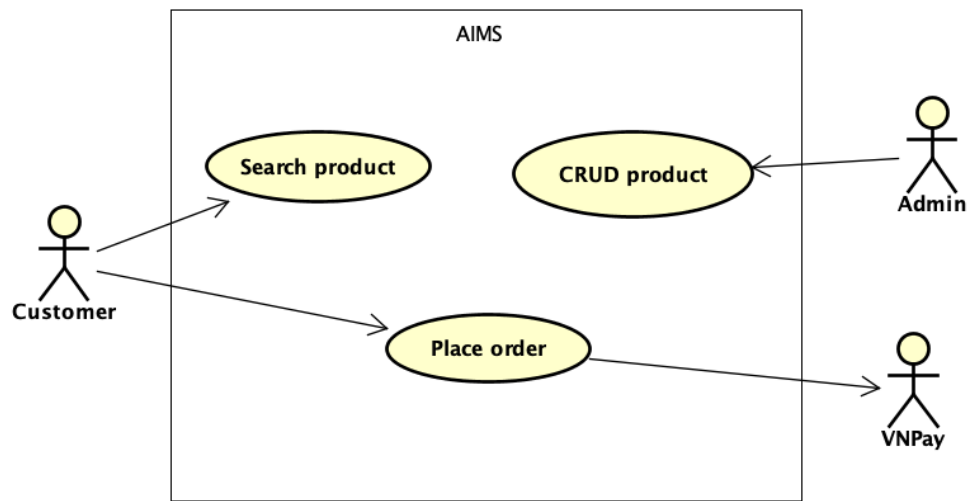

Figure 1-An Example of (a portion of) Use Case Diagram for AIMS.

Figure 1 is merely an example of a portion of a use case diagram for AIMS. Please refer to the problem statement of AIMS for further details, and proceed to complete the use case diagram accordingly.

2.3. OUTLINING USE CASES

In this part, you are asked to outline use cases in the AIMS Project. Specifically, you have to write the outline for all the use cases to *place an order*, including:

- Basic flow of the event
- Alternative flows of the event

Name your file <StudentID>_UC_Outlining.docx (e.g., 20201234_UC_Outlining.docx) and submit it on MS Teams before the deadline.

2.4. REFINE THE USE-CASE DIAGRAM

Based on your UC outlines, review the basic and alternative flows to determine where use-case relationships should be adjusted or introduced. For example, refine the diagram by factoring repeated or complex steps in the basic flow into «include» use cases (only when warranted), and by representing optional or conditional paths in the alternative flows as «extend» use cases. Rename use cases and actors for clarity where needed, and submit the final Astah file and a PNG export of your use case diagram to the MS Teams assignment before the deadline.
