

Design for class “ErrorDialog”

Inheritance of class “Dialog”

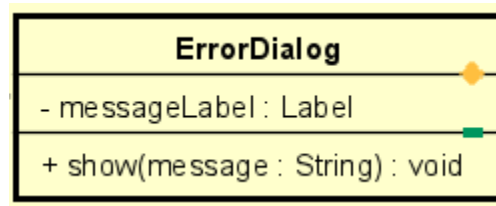

Table 1. Attribute Design

#	Name	Data type	Default value	Description
1	messageLabel	Label	""	The label showing the error message.

Table 2. Operation Design

#	Name	Return type	Description
1	show(message)	void	Display an error popup with the given message.

Method Design:

1. show

- Parameter:
 - message: String - the error text to present to the user.
- Exception:
- Method:
 - Set `messageLabel.text = message`.
 - Display dialog in modal mode (block underlying window until acknowledged).
 - Provide an OK/Close button; on close, return control to caller.
 - Optionally log the error message (call `Logger.error(message)`).
