

Design for class “SuccessfulOrderScreen”

Inheritance of class “CustomerScreen”

SuccessfulOrderScreen
- currentOrder : Order
+ setBController(bController : BaseController) : void + navigateTo(screen : BaseScreenHandler) : void + setOrderConfirmation(order : Order) : void + handleContinueShoppingClick() : void

Table 1. Attribute Design

#	Name	Data type	Default value	Description
1	currentOrder	Order	null	The finalized completed order.

Table 2. Operation Design

#	Name	Return type	Description
1	setOrderConfirmation(order)	void	Display success message for this order.
2	handleContinueShoppingClick()	void	Navigate back to product browsing.

Method Design:

1. setOrderConfirmation

- Parameter:
 - order: Order - the confirmed order to display.
- Exception:
- Method:
 - Store currentOrder = order.

- Populate UI elements with order confirmation number, order summary, estimated delivery.
- Optionally display a “Download/Print Invoice” button bound to the order.

2. handleContinueShoppingClick

- Parameter:
- Exception:
- Method:
 - Perform navigation to the product listing or home screen: call `navigateTo(homeScreen)` or equivalent.
 - Clear temporary UI state related to the completed order (optionally clear cart).
 - If needed, call `BaseController` or `PlaceOrderController` callbacks to refresh product list or cart information.
